CARE AND MAINTENANCE

Periodic maintenance is necessary, the same as for other equipment, to insure long-term durability and customer satisfaction. NOTE: Warranty may be voided if proper maintenance procedures are not followed. Users of our product should be advised of the following:

Adjustments - We recommend that the product be examined every sixty (60) days for loose screws, missing glides, cracked or broken welds, loose rails, loose joints, loose seat pads, broken casters, cracked laminate and splintered wood

To prevent the product from becoming unstable:

- Loose screws should be tightened as required
- Cracked or broken welds, loose rails and loose joints should be repaired immediately
- Missing glides or broken casters should be replaced immediately
- Columns should be seated properly on the hub of the base

To avoid tears and lacerations:

- All protruding screws, nails, etc. should be removed
- Chipped or cracked laminate should be repaired or replaced
- Wood splinters should be cut-off, sanded smooth and refinished

NOTE: Merchandise requiring adjustments or showing any signs of structural failure should be taken out of service immediately.

Wood Finishes - Coat wood with a hard paste wax every three to four months during the first year of use. After the first year, application can be less frequent. To clean: use a liquid cleaner-wax polish combination. Do not use abrasive household solvents. To repair scratches, use a wax repair stick. Water spills on the surface should be wiped off immediately.

Wood products should not be subjected to extreme temperatures or moisture.

All wood when subject to exterior elements may discolor, fade and crack over time.
