Benchmark has the capabilities to create millwork to your specific needs. We use the highest quality construction materials and have manufacturers/designers that can produce a visually pleasing product. Through research and development, we have created details for millwork pieces to make each piece as durable as possible. We have designers and engineers to review your drawings and make material and construction suggestions to ensure you receive the best product with a long lifetime.

BANQUETTE SEATING

Benchmarks banquette seating is designed to withstand the wear and tear of daily use and provide what your customers want most, comfort. All banquette seating comes standard with a 6" stainless steel toe kick and high density foam. Power for charging can be added to any of our banquettes.

Our banquettes are designed with durability and visual aesthetic in mind. Many are available with a crumb channel design to aid in easy clean up. Typically, we build our banquettes to 48" high, but we can modify any design to your desired height. A solid surface cap or other durable material is designed into every banquette to protect chipping and loosening of the laminate. All of our toe kicks are stainless steel to resist water damage from mopping and add extra durability for daily wear and tear. Extra features such as planter troughs, power and data, and decorative screens can be added to any banquette design.

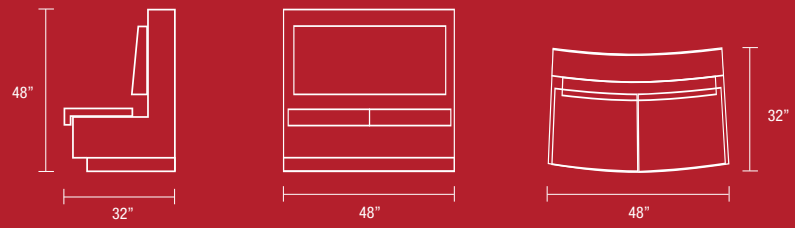
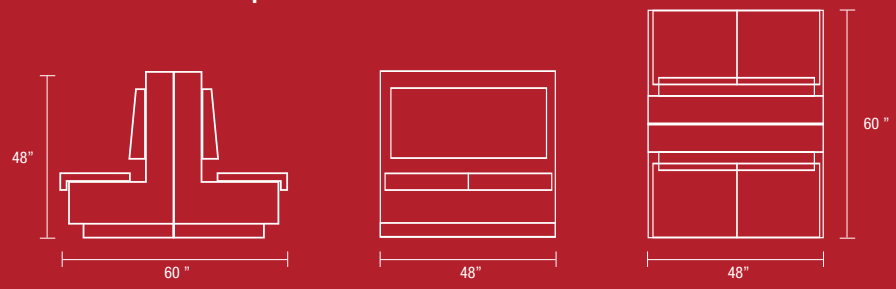
Curved Banquette #8214

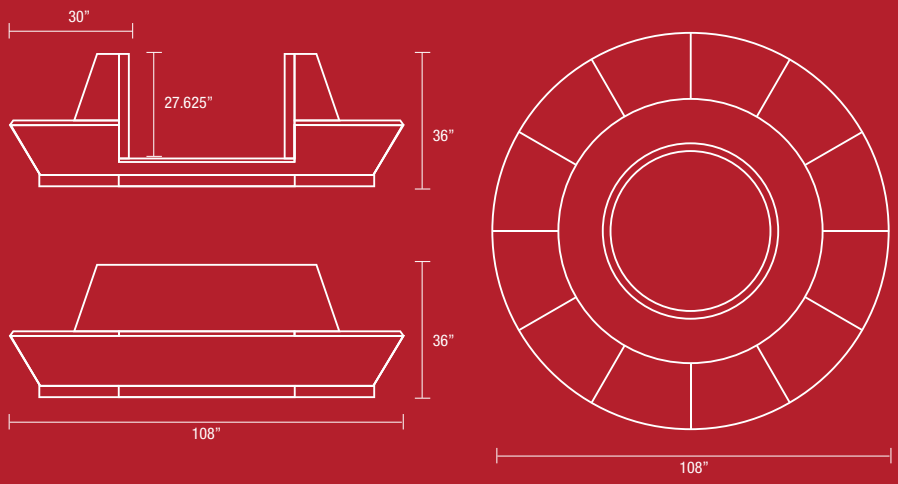
Note: Radius is custom to your project



Double Sided Banquette #8212



Circular Banquette #8218



COMMUNAL TABLES

Social interaction is even more important in this digital world we live in, and communal tables help bring people together. All tables come with a 4” stainless steel base and are available in dining, or bar height. A lower section can be added to accommodate ADA requirements.

#3300

#3312

Communal tables come with a stainless steel base, The stainless steel can be a wide leg to accommodate power and still keep an open feel to the base of the table. Solid sides can also be an option in laminate, solid surface or other material with stainless steel trim. Our communal tables come in 4 lengths, 96”, 128”, 160”, and 192” and two heights, 30” and 42”. Lengths of 128” and above can have a drop down to 30”H to accommodate ADA requirements. All communal tables are built to 30”W to avoid an additional seam in the material. These tables can be fully customized to the project if there are unique circumstances.

COUNTERS

Benchmark manufactures high quality durable counters in all different forms, from straight to curved; with or without power, dining, counter, or Bar heights. We take ADA requirements into consideration on all counters and accommodate for that in the design. We can customize any counter to fit your needs.

COUNTERS

#3400

Our counters can be constructed as a freestanding counter or a low divider wall as well as planters, decorative panels, and power can be added to any counter. All legs and divider walls will have a stainless steel toe kick. Laminates, solid surface or other material insets can be used on counters horizontal and vertical surfaces. A top cap of solid surface or stainless steel trim is typically used on divider walls and planter troughs to make the counter as durable as possible. Stainless steel trim is used on all corners for extra durability. Like our communal tables, a drop down to 30”H can be added to any counter to accommodate ADA requirements.

RECEPTACLES

#6500

#6504

Benchmark has created a variety of trash/recycling receptacles to suit your needs. They can accommodate high chair storage or just include the trash receptacles. Each style receptacle can be customized to meet your needs.

RECEPTACLES

Trash receptacles are freestanding and are available in single, double, or triple sizes. Double and triple trash receptacles can be built with a space between them for high chair storage. All corners are trimmed in stainless steel for durability. Each receptacle can be built with a flap door or it can just be an opening with no flap. The tray top storage area is all stainless steel, a top cap of solid surface or stone can be added as an extra feature on any trash receptacle. A liner is included with each receptacle and the receptacle doors can be locking if desired. A 4" toe kick is added around the bottom of all receptacles.
